Presenting from a USB stick

Firstly, activate the projector and the computer. Press the **PROJ** button on the control panel to switch it on, and **COMP** to switch on the computer.

Next, turn on the projector image by pressing **ON** on the control panel, and press **PC** to use the built-in lectern computer (if you are using a laptop select **LAPTOP** instead, once it is connected).
If the display panel isn’t showing anything, press the buttons to wake it up.

Insert your USB stick into the front of the computer and wait a moment; once the stick is recognised it will automatically open (or you can open it from My Computer).

Use the lectern’s stylus pen as a mouse pointer, or touch the smart board screen to open and display your presentation.
